

Project Name:

- Bird Health Tracker

MVPs

1. Allows for a user to input their bird's name, age, species of bird, current diet (seeds, pellets, fruits, vegetables, etc...), how much they are being fed, when they are fed, and their bird's poop color (gross, but super important for bird's health)
2. The inputted values are then submitted and returned in a separate div in a "pet card"
3. Allows the user to delete the pet card at any time

Coding To-Do List

- Home Page
 - Add a picture of a bird as the background
 - Add main text "Bird Health Tracker"
 - i. Font-family: ???
 - ii. Font-color: white
 - Add "track" button
 - i. Log Health
 - ii. Button color: gray?
 - iii. Button text color: white
 - Make sure that the sections, nav bar, and footer are slightly opaque
- Log Health Page
 - Create a form to allow input for bird health values
 - i. Bird name
 - ii. Age
 - iii. Species
 - iv. Diet
 - v. Amount being fed
 - vi. When they are fed
 - vii. Poop color
 - Create the pet card
 - i. Include a delete button to delete the card
